Academic integrity

Dear Editor,

Recently another drought talk meeting was held to discuss our critical water shortage issues. I attended last years meeting only to have mine and other citizen concerns dismissed. In fact one speaker, a government official whose salary is paid by our taxes actually said, "I'm not interested," when I shared the fact that the Shasta County Board of Supervisors voted unanimously in July of 2014 to investigate the climate engineering/aluminum contamination issue.

Well, maybe now given the fact we are in another year of catastrophic climate engineered drought, which will continue to decimate our forests, crops and California communities (such as the recent tragic Middletown area fire) until it is stopped, just maybe some who say they care and are in positions of leadership will actually have the academic and moral integrity to investigate this issue.

I would suggest they start here. It's all here, for those who have the eyes to see:

The recently uncovered 750-page 1978 Senate report regarding impacts of weather modification programs upon our water supplies, crops and forest lands. See: <http://www.geoengineeringwatch.org/massive-us-senate-document-on-national-and-global-weather-modification/>.

Here's a couple of excerpt from the report:

"According to complaints we get, the pattern is still remaining as it did in the early 1960's. When a thunderstorm appears to the west or is starting to build up, a plane will move in mysteriously out of nowhere, and maybe fly once or twice along the leading edge of the thunderstorm, disappear and the thunderstorm just practically dissipates."

"In a recent article contributed by the Tri-State Natural Weather Association ...in a nationally circulated publication devoted to organic agriculture, the following evils were catalogued ... 1) Cloud seeding [aka today as climate engineering] has been responsible for the great 5-year drought in the Northeast United States."

It's time to care and show academic and moral integrity.

Sincerely,
Rose Taylor
Mount Shasta
