Evening Mr West

In order that I can analyse your youtube video concerning the validity of the Worthing to Beachy Head observation, please could you supply me with the following information:

Concerning the google Earth screen shot at time 0.30 in your video, as shown below, please can you email a complete screen shot that shows the directions, elevation and eye alt of the screen shot.

I look forward to receiving it.

Many thanks

Dr John

It's from your location near the Yacht club, with the eye alt raised up enough to see the shore at BH. About 200m I think,

which has a minuscule effect on the shape of BH. See GE file on Metabunk.

Evening Mick

As requested, please can you send me the Google Earth Pro Screen shot displaying the directions, altitude and eye alt.

The terms "near" and "about" are not appropriate in this situation.

I look forward to receiving the screen shot.

Regards

Dr John

I'd also strongly encourage you to take photos of BH from Cissbury Ring as the difference should be substantial.

Mr West

Please as requested, can you send me the screen shot from Google Earth Pro.

Not an overlay.

Thank you

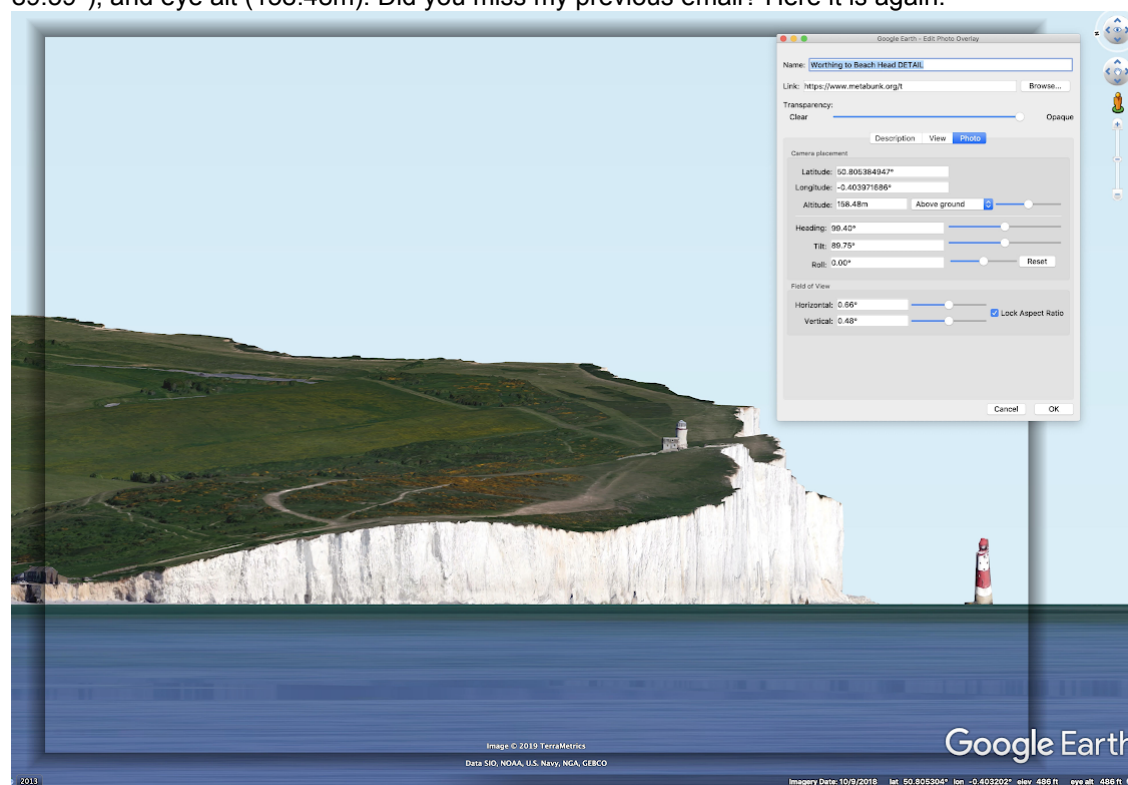

Dr John

That is a screen shot from Google Earth Pro, it shows the directions ( $99.40^\circ$ ), elevation (assuming you mean the tilt it's  $89.59^\circ$ ), and eye alt (158.48m). Did you miss my previous email? Here it is again:

You have your camera in the wrong location in your response video. The image I sent you is taken from your location, just zoomed in using a photo overlay. See:

Here's a more detailed explanation. The image is real, just zoomed in, and I show you how you get it in Google Earth here.
